

MERLIN BIRD ID

Overview of App

Merlin Bird ID is developed by the Cornell Lab of Ornithology. It helps users identify birds by answering a few questions or by uploading a photo. The app also provides birdwatching hotspots and a database of over 7,500 bird species.

Strengths

Easy to use, highly accurate bird identification, extensive species database, offline access.

Weaknesses

Some features require large data downloads, which might be a limitation for devices with limited storage

In-app snaps

EBIRD

Overview of App

Also from the Cornell Lab of Ornithology, eBird is a community-driven app that allows users to record bird sightings, share them with others, and contribute to a global birdwatching database. It includes bird checklists and the ability to explore sightings from around the world.

Strengths

Community-driven data, extensive bird database, integration with other Cornell Lab apps

Weaknesses

Can be complex for beginners, requires a consistent internet connection for full functionality

In-app snaps

BIRDNET

Overview of App

BirdNET focuses on identifying birds by their sounds. Users can record bird calls and songs, and the app will analyze the audio to identify the species. It's a collaboration between the Cornell Lab of Ornithology and Chemnitz University of Technology

Strengths

Unique sound identification feature, easy to use, great for birders focused on auditory identification

Weaknesses

May not always identify less common or overlapping bird sounds accurately, requires good audio quality for best results.

In-app snaps

Easily identify bird songs with BirdNET.

Which bird is singing here?

BirdNET can identify over 3000 bird species.

Easily identify bird songs with BirdNET.

App Comparison

Criteria	Merlin Bird ID	eBird	BirdNET
Key Features	- Bird identification via photo or questions - Birdwatching hotspots - Database of 7,500+ species	- Record and share bird sightings - Global birdwatching database - Bird checklists	Identify birds by their sounds. Record and analyze bird calls and songs.

BirdNET is unique in focusing on bird sounds, which is super helpful if you're into identifying birds by their calls. Whether you're just starting out or looking to dive deeper into birdwatching, one of these apps will have what you need.

Tech Behind Popular Birdwatching Apps

EBIRD

- **Database:** PostgreSQL and/or MySQL- APIs: Custom bird data
- **APIs-IDE:** Android Studios -
Feature: Global bird observation platform

BIRDNET

- **Machine Learning:** TensorFlow and/or PyTorch
- **Audio Processing:** Librosa
- **Cloud:** Google Cloud, AWS
- **Feature:** Bird sound identification using AI

MERLIN BIRD ID

- **Recognition:** TensorFlow (for images and sounds)
- **Platforms:** iOS, Android (ARKit, ARCore)-
- **Offline Use:** Regional bird packs
- **Feature:** Bird identification via photos and sounds
